

INCLEMENT WEATHER INFORMATION

Wintertime involves various inclement weather conditions that are beyond our sphere of control.

Poor weather can make working unfeasible or significantly increase safety hazards.

As a result, weather conditions may cause project delays.

SNOW

- We cannot complete most work when it is snowing.
- Even with clear skies, excess snow on the ground or roof may hinder us from working.

COLD

- We can have a sunny day with bitterly cold temperatures. Cold weather can prevent the proper installation of many materials.
- The cold brings ice and ice can create hazardous driving and working conditions.

WIND

- High wind can cause additional safety risks for the crew.

- Roofs, ladders, fence installation, and other tasks become more dangerous if the wind is too strong.

HOW DOES THIS AFFECT YOU?

- 1** We may have to reschedule your job start date.
- 2** May push pause on your job and continue when the weather permits.
- 3** May start work later in the day when the temperature warms up, or stop early before a storm arrives.
- 4** Schedule changes may happen on a short notice.

Thank you for your understanding and for choosing The Upfront Team!
